Who are MIT Consulting?

MIT Consulting is a turnkey technology solutions outsourcing company, providing a full spectrum of services and support for our clients.

Our head office is located in Toronto, Canada. We provide on-site tech support services for the GTA (Greater Toronto Area) and Southern Ontario, and development services globally.

- Our technical support team is Microsoft Certified (MCP), and we have specialists with certification in Cisco, Citrix, MS Exchange and more!
- Our software development team is experienced in developing “thin client” applications that run in a web browser, as well as stand-alone desktop applications using the latest technologies.
- Our management team has extensive experience in the business consulting field, which means that we understand your business and can serve you better.

Why Use An I.T. Company To Move Offices?

The process of relocating a large number of computers from one office to another can be extremely taxing for a company's IT staff.

Each computer may take only a few minutes to process at the original location, and then set up and test at its destination, but when multiplied across hundreds (or thousands) of computers, the process can simply be too much for a small, permanent technology division to handle. Especially when they are primarily focused on setting up and testing their servers.

When considering the additional factors involved in installing network and telephone systems at a new location, the process can become entirely unwieldy.

MIT Consulting can assist corporations during the relocation process by supplying them with additional, temporary staff with experience in the disconnecting / reconnecting process.

We employ experts in many areas of IT, resulting in our ability to handle many aspects of IT moves on behalf of our clients.

MIT CONSULTING

Our Relocation Services

- Additional staffing to boost internal IT staff during large projects
- Equipment labeling and inventory checking services
- Disconnecting/reconnecting computers, telephones, printers etc.
- Testing to ensure equipment functions correctly after relocation
- Network/cable installation
- Phone system installation and testing
- Computer and monitor mounting

Case Study: Honda Canada

Honda Canada was going through the process of relocating several hundreds of their staff members from one building to another.

MIT Consulting was able to assist Honda with its relocation process by supplying them with a number of trained temporary technicians, helping them speed up the disconnect/reconnect process to a few hours.

Our technicians worked with the moving company that was hired to physically move the furniture and desks, in order to ensure that all of Honda's information technology architecture was properly stored and labeled.

After the moving company had moved the equipment to its new location, our technicians set up each computer, connected it to the network, and ran a test "script" to ensure that everything worked properly. The result was that Honda's staff returned on Monday morning to find their computers up and running as usual.
